

AMENDMENTS TO THE CLAIMS

A detailed listing of all claims that are, or were, in the present application, irrespective of whether the claim(s) remains under examination in the application are presented below. The claims are presented in ascending order and each includes one status identifier. Those claims not cancelled or withdrawn but amended by the current amendment utilize the following notations for amendment: 1. deleted matter is shown by strikethrough; and 2. added matter is shown by underlining.

1. - 19. (Cancelled)

20. (Currently Amended) A medical device comprising a plurality of surface capillary fibers associated with at least a portion of a surface of the device, the fibers comprising a polymer and a quantity of bioactive agent associated with the surface capillary fiber,

wherein the bioactive agent elutes in a controlled way from the fiber when the surface capillary fiber is contacting a patient's body fluids/tissue,

wherein each of the surface capillary fiber comprises a ~~has a channel~~ capillary along its outer surface ~~that extends substantially parallel to the length of the surface capillary fiber, the channel extending running~~ along at least a portion of the length of the surface capillary fiber, and

wherein the medical device is a percutaneous device or an implantable device.

21. (Original) The medical device of claim 20 wherein the bioactive agent is selected from a group consisting of an anti-microbial agent, a thrombolytic agent, an anti-platelet agent, an anti-coagulation agent, a growth factor or a combination thereof.

22. (Original) The medical device of claim 20 wherein the bioactive agent comprises a thrombolytic agent.

23. (Previously Presented) The medical device of claim 20 wherein the bioactive agent comprises tissue plasminogen activator.
24. (Original) The medical article of claim 20 wherein the bioactive agent comprises an anti-microbial agent.
25. (Previously Presented) The medical device of claim 20 wherein the surface capillary fiber has a surface area of at least about a factor of 1.5 greater than a corresponding circular fiber with an equivalent diameter.
26. (Original) The medical device of claim 20 wherein the device is configured for placement within a blood vessel without blocking flow through the vessel.
27. (Currently Amended) The medical device of claim 20 wherein the device comprises a catheter and additional surface capillary fibers, wherein the additional surface capillary fibers are associated with the inner surface of the catheter.
28. (Currently Amended) A tubular medical device comprising a tubular substrate having an interior surface and an exterior surface and a plurality of surface capillary fibers associated with at least a portion of one of the surfaces with an adhesive, mechanical binding, heat bonding or chemical bonding,
wherein each of the surface capillary fiber comprises a ~~has a channel~~ capillary along its outer surface ~~that extends substantially parallel to the length of the surface capillary fiber, the channel extending~~ running along at least a portion of the length of the surface capillary fiber.
29. (Original) The tubular medical device of claim 28 wherein the device comprises a catheter configured for placement within a vessel of a patient.
30. (Original) The tubular medical device of claim 29 wherein the catheter is a microcatheter.

31. (Previously Presented) The tubular medical device of claim 28 wherein the surface capillary fibers are associated with a bioactive agent.
32. (Original) The tubular medical device of claim 31 wherein the bioactive agent comprises heparin sulfate.
33. (Previously Presented) The tubular medical device of claim 28 wherein at least one of the surface capillary fibers is associated with at least a portion of the interior surface.
34. (Currently Amended) A medical device comprising a non-porous surface at least a portion of which is covered with surface capillary fibers,
wherein the surface is contoured to match a portion of a structure within a patient,
wherein each of the surface capillary fiber comprises a ~~has a channel~~ capillary along its outer surface ~~that extends substantially parallel to the length of the surface capillary fiber, the channel extending~~ running along at least a portion of the length of the surface capillary fiber, and
wherein the medical device is an implantable device.
35. (Original) The medical device of claim 34 wherein the non-porous surface comprises a polymer.
36. (Cancelled)
37. (Previously Presented) The medical device of claim 34 wherein the surface capillary fibers are associated with a bioactive agent.
38. - 46. (Cancelled)

47. (Currently Amended) A method for delivering a bioactive agent using a medical device, the method comprising contacting a patient's body fluids/tissues with a plurality of surface capillary fibers associated with at least a portion of a surface of the device,

wherein each of the surface capillary fiber comprises a ~~has a channel~~ capillary along its outer surface ~~that extends substantially parallel to the length of the surface capillary fiber, the channel extending~~ running along at least a portion of the length of the surface capillary fiber,

wherein the ~~channels~~ capillaries of the fibers are associated with a bioactive agent that elutes in a controlled way from the fibers, and

wherein the medical device is a percutaneous device or an implantable device.

48. (Withdrawn, Currently Amended) The method of claim 47 wherein contacting of the patient's fluids/tissue comprises implanting a prosthetic device comprising the surface capillary ~~[[fiber]]~~ fibers.

49. (Currently Amended) The method of claim 47 wherein contacting of the patient's fluids/tissue comprises delivery of a catheter associated with the surface capillary ~~[[fiber]]~~ fibers.

50. (Currently Amended) The method of claim 49 wherein the surface capillary ~~fiber is~~ fibers are associated with the interior lumen of the catheter.

51. (Withdrawn, Currently Amended) The method of claim 49 wherein the surface capillary ~~fiber is~~ fibers are associated with a medical device that is delivered through the catheter.

52. (Original) The method of claim 47 wherein the bioactive agent is selected from the group consisting of a thrombolytic agent, an anti-platelet agent, an anti-coagulation agent, a growth factor or a combination thereof.

53. (Previously Presented) The medical device of claim 20 wherein the bioactive agent is associated with a controlled release agent.

54. (Previously Presented) The medical device of claim 20 wherein the plurality of surface capillary fibers are associated with at least a portion of a surface of the device with an adhesive, mechanical binding, heat bonding, or chemical bonding.

55. (Previously Presented) The medical device of claim 47 wherein the plurality of surface capillary fibers are associated with at least a portion of a surface of the device with an adhesive, mechanical binding, heat bonding, or chemical bonding.
